(57) ABSTRACT

Address groups are composed of two of address blocks 16,
17, 18, and 19, where the address blocks 16, 17, 18, and 19
are disposed in a sector address region 5 and include
identifiable information of address numbers 13 and overlap-
ping sequential numbers 14. The address groups are dis-
posed so that each group is alternately shifted from a track
center 2 toward the inner periphery side or the outer periph-
ery side, by a width substantially equal to half the track
pitch, along the radius direction.

4 Claims, 26 Drawing Sheets

Reproduction of connection portion between
address groups where pits overlap

Reproduction of connection portion between
address groups where there is non-pit data
